	Data Analysis for Humanities with Python

Description	• Programming with Python
	• Programming with Python in the Humanities
	• Data Analysis Applications with the Python language:
	    o Thematic analysis of texts
	    o Linguistic analysis of texts
	    o Stylistic analysis of texts
	    o Image analysis algorithms
	    o Analysis of geographic data

Learning Outcomes	After the course the student will be able to • To develop applications based on the Python programming language to analyze textual, image and geographic data derived from datasets developed by Humanities researchers.
